

BIOFLEX®

Grey

White Shock formula

ECO-FRIENDLY MINERAL ADHESIVE WITH AN EXTREMELY LOW CHEMICAL ADDITIVE CONTENT FOR HIGH PERFORMANCE BONDING WITH NO VERTICAL SLIP AND LONG OPEN TIME, FOR PORCELAIN TILES, CERAMIC TILES AND NATURAL STONE.

FEATURES AND ADVANTAGES

with Mineral Bentonite

BIOFLEX® CONTAINS EXCLUSIVE MINERAL BENTONITE WHICH, ON CONTACT WITH THE MIXING WATER, TRANSFORMS INTO A HIGHLY THIXOTROPIC ADHESIVE, MAINTAINING SHAPE AND THICKNESS UNDER THE TILE AND GUARANTEEING UNBEATABLE SMOOTH SPREADING.

with Natural NHL Lime

BIOFLEX® CONTAINS MINERAL CEMENT IMPROVED WITH NATURAL NHL LIME, WHICH GIVES THE MIX GREATER PLASTICITY AND SLIDE. IT PREVENTS THICKENING IN THE BUCKET AND REDUCES THE USE OF CHEMICAL ADDITIVES.

with Plant Latex

BIOFLEX® CONTAINS INGREDIENTS OF PLANT ORIGIN THAT IMPROVE WORKABILITY AND OPEN TIME. BIOFLEX® HAS AN EXTREMELY LOW CHEMICAL ADDITIVE CONTENT AND DOES NOT EMIT DANGEROUS SUBSTANCES AND UNPLEASANT ODOURS.

PREPARATION AND USE

The indications for use refer to the general principles of application to a high professional standard. Abide by any standards and national regulations.

• PREPARATION OF THE SUBSTRATE

Substrates must comply with BS 5385, parts 1-5, be level, cured, undamaged, compact, rigid, resistant, dry and free from any debonding agents and from damp rising.

Anhydrite substrates must have a residual humidity $\leq 0,5$ CM-%. Cement-based screeds must have a residual humidity ≤ 2 CM-%. Anchored substrates must comply with BS 8204 and in anhydrite must have a residual humidity $\leq 0,3$ CM-%.

• ADHESIVE PREPARATION

Mixing water (EN 1348)

Grey $\approx 30.5\% - 33.5\%$ by weight
Shock White $\approx 33\% - 36\%$ by weight

Mixing water on-site

Grey $\approx 7.8 \ell / 1$ bag
Shock White $\approx 8.3 \ell / 1$ bag

The amount of water to be added, indicated on the packaging, is an approximate guide. It is possible to obtain mixtures with consistency of variable thixotropy according to the application to be made.

• Application

To guarantee maximum adhesion it is necessary to apply a layer of adhesive sufficient to cover the entire back of the coating material.

Large, rectangular sizes with sides > 60 cm and low thickness sheets may require adhesive to be applied directly to the back of the material.

Check samples to make sure the adhesive has been transferred to the back of the material.

Create elastic expansion joints:

- $\approx 10 \text{ m}^2$ in external applications,
- $\approx 25 \text{ m}^2$ in internal applications,
- every 8 metres in long, narrow applications.

Respect all structural, fractionizing and perimeter joints present in the substrates.

SAFE LAYING ON SITE

The SAFE LAYING ON SITE method has the aim of testing adhesives both using relevant standards and in some of the most extreme conditions that can be met on site, using rigorous scientific methods and some of the most modern technology currently available in the Kerakoll® GreenLab.

SPECIAL NOTES

• PRE-TREATMENT OF SPECIAL SUBSTRATES

Gypsum-based plasters/renders, anhydrite screeds and cellular concrete, for internal use:
 Primer A Eco

Vinyl sheets for interior use: Keragrip Eco

Please see the technical data sheet on how to use the Primers properly.

• MATERIALS AND SPECIAL SUBSTRATES

marble and natural stone

Materials that are subject to deformation or staining due to water absorption require a quick-setting or reactive adhesive.

Marble and natural stone in general may have characteristics that vary even with reference to materials of the same chemical and physical nature. For this reason it is essential you consult Kerakoll Global Service to request specific indications or to carry out a test on a sample of the material.

In the absence of specific indications from the manufacturer, natural stone slabs with reinforcement layers, in the form of resin coating, polymer mesh, matting, etc. or treatments (for example damp courses, etc.) applied on the laying surface must be tested in advance to ensure they are compatible with the adhesive.

Check for the presence of any really consistent traces of rock dust created during cutting, and remove them if found.

waterproofing products

Adherent and floating polymer sheets, liquid bitumen and tar-based sheets or membranes require application of a laying screed on top.

• SPECIAL APPLICATIONS

Insulating and soundproofing panels applied using spot adhesion as recommended by the manufacturers.

Plasterboard and fibro-cement slabs must be firmly anchored to specific metal frames.

• Do not use

On timber, metal, plastic or resilient materials, deformable substrates or subject to vibrations.

On screeds, plasters/renders, concrete not yet cured and affected by important drying shrinkage.

On organic-based waterproofing products (such as RM according to EN 14891).

On smooth prefabricated concrete.
