HIGHLY DEFORMABLE AND WORKABLE, HYBRID GEL ADHESIVE, BONDS EVERYTHING AND IS TESTED UNDER THE MOST EXTREME WORKING CONDITIONS. ECO-FRIENDLY. IDEAL FOR USE IN GREENBUILDING.

## **VERY FAST BONDING**

Adhesive strength 5 times superior to a class C2 (4.5 N/mm²) cement-based adhesive after 24 hours

## **STRESS RESISTANT**

10 times more deformable than a class S2 (> 50 mm) cement-based adhesive

#### **EASY TO SPREAD**

5 times less viscous than a (35 Pa\*s) polyurethane adhesive, transforms into a smooth gel like a cement-based adhesive

# **FEATURES AND ADVANTAGES**

VERY FAST BONDING	HIGH AND LOW THICKNESS	DISTRIBUTES TENSILE STRENGTH
LONG OPEN TIME	MAXIMUM DEFORMABILITY	INCREASES THE PERFORMANCE
SHAPE MEMORY	FULL WETTABILITY	TRANSFERS THE FORCES
WATER RESISTANT	NO SHRINKAGE	ABSORBS DYNAMIC LOADS
EASY TO SPREAD	STRUCTURAL ADHESION	<b>ELIMINATES THE RISK OF FROST</b>

## **GREENBUILDING RATING®**

- Category: Organic Mineral Products
- Class: Biogel® adhesives gel with SAS Technology
- Rating: Eco 2

B	Red on Miner day	IAQ IAQ IAQ IAQ VOCA Air Qualita	SLV REDUCED Soft on 1 5 5 0 1 10	Extended lines	Mealth Core
eco2			Solvent-free		Non-toxic and non-hazardous

RATING SYSTEM ACCREDITED BY CERTIFICATION BODY SGS

 The GreenBuilding Rating® is a dependable and reliable evaluation method for measuring and improving the environmental performance of building materials.

## **ECO NOTES**

- Improved on-site safety guaranteed as it is non-toxic and non-hazardous
- Made from solvent-free organic raw materials

# **COMPLIANCE AND CERTIFICATIONS**

The combination of substrates, materials and uses indicated may not always be possible to achieve. It is essential that you consult the individual product technical sheets to check their suitability. Anything that is not foreseen in this list must be requested directly from Kerakoll Global Service.

OVERLAYING
TERRACES AND BALCONIES
FACADES
SWIMMING POOLS AND
FOUNTAINS
SAUNAS AND SPA
DOMESTIC
COMMERCIAL
INDUSTRIAL
STREET FURNITURE

The indications for use refer to the general principles of application to a high professional standard. Abide by any standards and national regulations.

#### • PREPARATION OF THE SUBSTRATE

Substrates must comply with BS 5385, parts 1-5, be flat, compact, free from with no loose flaky parts, resistant, free from any debonding agents, dust and moisture rising.

Anhydrite substrates must have a residual humidity  $\leq$  0,5 CM-%. Cement-based screeds must have a residual humidity  $\leq$  2 CM-%. Anchored substrates must comply with BS 8204 and in anhydrite must have a residual humidity  $\leq$  0,3 CM-%.

#### ADHESIVE PREPARATION

Single Pack: Part B is found inside the pack. Respect the preset ratio of 8.6 : 1.4.

Remix part B into the bucket containing part A, being careful to mix the two parts uniformly until a smooth, even coloured mixture is obtained.

Packs of Biogel® Extreme® must be stored at a temperature of  $\approx$  +20 °C for at least 2/3 days prior to use.

#### APPLICATION

Biogel® Extreme® can be applied with a suitable toothed spreader, to be chosen according to the size and type of the tile. Using the smooth part of

the spreader, apply a fine layer of product, pressing down onto the substrate in order to ensure maximum adhesion. Press down each tile to allow for maximum coverage of the surface.

To guarantee structural adhesion it is necessary to apply a layer of adhesive sufficient to cover the entire back of the coating material.

Large, rectangular sizes with sides > 60 cm and low thickness sheets may require adhesive to be applied directly to the back of the material.

Check samples to make sure the adhesive has been transferred to the back of the material.

Create elastic expansion joints:

- ≈ 10 m<sup>2</sup> in external applications,
- $\approx$  25 m<sup>2</sup> in internal applications,
- every 8 metres in long, narrow applications. Respect all structural, fractionizing and perimeter joints present in the substrates.

#### CLEANING

Clean the tools and any residues of Biogel® Extreme® from the coated surfaces using water while the adhesive is still fresh. Once hardened, the adhesive can only be removed mechanically or using Fuga-Shock Eco cleaner.

The SAFE LAYING ON SITE method has the aim of testing adhesives both using relevant standards and in some of the most extreme conditions that can be met on site, using rigorous scientific methods and some of the most modern technology currently available in the Kerakoll® GreenLab.

#### WORKABILITY

Packmonopack 10 kg (8,6+1,4 kg)Mixing ratioPart A : Part B = 8,6:1,4

Shelf life ≈ 24 months in original packaging

Protect from frost

Adhesive thickness from 2 to 15 mm

Coverage per mm of thickness  $\approx 1,45 \text{ kg/m}^2$ 

Temperature of the air, substrates and materials

from +5 °C to +35 °C

Pot life:

+23 °C  $\approx 110$  min. +35 °C  $\approx 80$  min.

Open time (BIII tile)

+23 °C  $\approx$  180 min. +35 °C  $\approx$  90 min.

Correction time (BIII tile)

+23 °C  $\geq$  120 min. +35 °C  $\geq$  60 min.

Foot traffic/grouting of joints (Bla tile)

+23 °C  $\approx 4$  hrs +5 °C  $\approx 15$  hrs

Ready for use at +23 °C / +5 °C (Bla tile)

 $\begin{array}{lll} \text{- light foot traffic} & \approx 6-20 \text{ hrs} \\ \text{- heavy traffic} & \approx 12-24 \text{ hrs} \\ \text{- swimming pools (+23 °C)} & \approx 3 \text{ days} \end{array}$ 

primers properly.

#### • PRE-TREATMENT OF SPECIAL SUBSTRATES

Timber thickness ≥ 25 mm: Keragrip Eco Pulep Metal and sheet metal: Keragrip Eco Pulep Gypsum and anhydrite (internal use only): Slc® Eco EP21

PVC and rubber: Keragrip Eco Pulep
As treating special substrates is difficult to classify in a standard manner, it is always advisable to contact Kerakoll Global Service and/or request a site inspection by a GreenBuilding Consultant. In any case it is essential to carefully read the technical data sheet on how to use the indicated

# MATERIALS AND SPECIAL SUBSTRATES Marble-natural stones and Recomposed materials

The materials subjected to high deformation or staining due to water absorption need a reactive adhesive such as Biogel® Extreme®.

Marble and natural stone in general may have characteristics that vary even with reference to materials of the same chemical and physical nature. For this reason it is essential you consult Kerakoll Global Service to request specific indications or to carry out a test on a sample of the material.

Check for the presence of any really consistent traces of rock dust created during cutting, and remove them if found.

**Special substrates**: adherent and floating polymer sheets, liquid bitumen and tar-based sheets or membranes require application of a laying screed on top.

#### • SPECIAL APPLICATIONS

**FACADES** 

The substrate should guarantee a cohesive tensile strength of  $\geq$  1,0 N/mm<sup>2</sup>.

The need to call for suitable mechanical safety anchoring must be evaluated by the designer for coverings with > 30 cm side.

Always apply a layer of adhesive directly on the back of the material.

# **SPECIAL NOTES**

#### WATERPROOFING FOR INTERIORS

Waterproof the fractionizing, expansion and desolidarisation joints in the substrates using Aquastop 120 anchored using Biogel® Extreme® adhesive; create special pieces for external angles, internal angles and connections to drains and installations by cutting the Aquastop 120 tape.

Apply the first coat with a smooth spreader in a thickness of about 1-2 mm, pressing down to ensure maximum adhesion to the substrate. Once the product has hardened, and after removing any surface condensation, apply a second coat of Biogel® Extreme®, creating a continuous even layer, about 2 – 3 mm thick, covering the substrate completely. The subsequent laying of the covering should be carried out with Biogel® Extreme® at least 12 hours after the application of the last coat. when working in low temperatures and with high humidity, the waiting time before laying will be longer.

The waterproofing on roofs of residential spaces must allow for the presence of a vapour barrier and insulation layers.

#### **PERFORMANCE**

#### **HIGH-TECH**

Working temperature	from -40 °C to +110 °C	

Values taken at +23 °C, 50% R.H. and no ventilation. Data may vary depending on specific conditions at the building site.

## **GENERAL NOTICES**

#### - Product for professional use

- abide by any standards and national regulations
- do not use the adhesive to correct substrate irregularities greater than 15 mm
- protect against direct rain for at least 12 hrs
- the temperature, ventilation and absorption of the substrate and covering materials, may vary the adhesive workability and setting times
- use the right size of toothed spreader for the format of the tile or slab
- for laying on cement-polymer waterproofing coverings, check the suitability on the producer's technical data sheet
- do not use in contact with polystyrene (Styrofoam, EPS, XPS, etc...)
- guarantee a full-bed in all external laying operations
- if necessary, ask for the safety data sheet
- for any other issues, contact the Kerakoll Worldwide Global Service 01527 578000 info@kerakoll.co.uk
